

RESEARCH NOTE

Wednesday, September 1, 2021

Waning Momentum Yet Still Risk-On, Quick Take, Calendar

Into the new month with this morning's global Manufacturing PMIs and other interesting economic releases, As noted in Tuesday's 'Data Deluge - Round One' research note, current economic indications are weaker, including the Chicago PMI and US Consumer Confidence along with quite a bit of European data. That is an extension of economic releases weakening a bit again after a stronger run in July.

And this continued into today's German Retail Sales and only steady European and UK Manufacturing PMIs, with much the same for the US numbers outside of Manufacturing PMI that did improve a bit. That is also with another very weak ADP Employment report for August. However, after recent ADP downside misses, it is not likely to bother the markets prior to Friday's US Employment report.

With much the same on the economic data and upbeat expectations versus the current still very prominent COVID-19 Delta variant headwinds, it is important to cut right to market indications that remain 'risk-on' on balance. That includes the US EQUITIES now churning once again, even though the September S&P 500 future is out above this week's 4,520 higher near-term weekly Oscillator threshold.

As positive as that looks, it is also still the case weekly MA-41 (on which the weekly Oscillator is based) is still rising \$25 per week. As such the Oscillator will be up to 4,545 into next week. After finishing last week above 4,520, the current resilient holding on dips into that area feels good. Yet that will not be good enough to trigger greater upside momentum next week unless it is also above 4,545 area at the end of this week, repeating the success of last week.

Of course, the jury will be out until the fact and market reaction on Friday's US Employment report. Of note, last week's Close above the 4,520 higher near-term weekly Oscillator threshold was a return to that generally strong tendency after the previous week's failure to do so.

Yet the lack of current impressive upside follow through in the US EQUITIES still sees greater 'risk-on' indications elsewhere. GLOBAL GOVVIES are still under a bit of pressure on deteriorating inflation expectations, even if the US T-NOTE remains more resilient than its international peers.

EMERGING CURRENCIES are also continuing to gain ground against the US DOLLAR, and the DEVELOPED CURRENCIES are finally showing more confidence in the global reopening prospects again. That has been, and remains, especially critical on the EUR/USD activity into its recent 1.1800 area DOWN Break, which it is now pushing more convincingly back above.

On one of the key fronts which encourages a more constructive future outlook, it seems US vaccine hesitancy is dropping markedly in the wake of the fear instilled by the ravages of the Delta variant. Those resistant to the shots for themselves or their families in the key low vaccination states have dropped from 48% to 23%.

Also very important for the forward view is the leadership from US professional sports, which many in those states respect more than government health officials (and in some cases even their own doctors.) According to the title of Friday's Reuters article (<https://reut.rs/2Y5muHP> noting the 'National Football League') "...wants COVID-19 vaccine mandate, as players' vaccination rate hits 93%."

That's very impressive in the context of an already high vaccination rate. Over a month ago it instituted a policy that if a game "...is canceled due to a Covid-19 outbreak among unvaccinated players, that team will have to forfeit and will be credited with a loss" (see the CNN article: <https://cnn.it/38y6rE4>.) This is all part of a push by many organizations in various sports that is leading into more overall corporate vaccination mandates, which would have seemed overbearing in other businesses prior to full FDA approval of the Pfizer-BioNTech vaccine.

And in a CNN segment just this morning, Don Lemon reported that there are indications various NFL teams are basing their pre-season cuts of players hoping to make the regular season roster based on the player's vaccination status. However overbearing that may seem in the context of people working so hard and being so talented, it is now a business decision regarding the team's success in its overall record for the season. That will get everyone's attention.

Courtesy Repeat of Tuesday's 'Data Deluge - Round One' research note

The last day of the month turns out to be the first day of this week's 'old month into new' major economic data deluge. That is particularly intense this week on September first being a Wednesday. That allows for both rounds of global PMIs being released tomorrow through Friday, also the next US Employment report. For more on the specifics we suggest review of your ROHR Weekly Report & Event Calendar,

The data is coming in with a bit of 'stagflation' (recall the 1970s.) Higher inflation in Europe is capped off today with weaker economic indications, which include the Chicago PMI and US Consumer Confidence. That is an extension of overall economic releases weakening a bit again after a stronger run in July.

That may be expected on COVID-19 pandemic pressures returning due to the aggressive Delta variant spread. That means the question now is as we have inquired recently on whether the Delta variant can be tamed? That is into the typically greater Fall infection spread, especially the case now on the US return to school push.

See our previous analyses for the full review of how today's weaker Consumer Confidence number is a reasonable reflection of all the ways the Delta variant pressure is once again showing up in the 'gathering' economy. That includes our extensive review of the deteriorating conditions in travel, hospitality, dining and other businesses that count on patrons' comfort with coming together in groups.

All of that said, the market activity is still consistent with Monday's 'Up Up and Away' research note observations (for which we encourage a review.) US EQUITIES seemed to have 'slipped their moorings' once again on the September S&P 500 future escaping the 4,520 higher of the near-term Oscillator thresholds.

As noted since last week, that might signal an ability to surge up to the major 4,621 'swing count' indicated on last November's (Pfizer vaccine efficacy announcement) more credible overrunning of the 3,400 area February 2020 old pre-COVID-19 pandemic all-time high... which is quite a major Objective.

It is also up into the higher major Oscillator indications (see below for more detail.) After weeks of the 'burden of proof' on bulls to keep the rally going into Oscillator thresholds, it has now shifted to the bears to pressure the market back below 4,520.

Along the way the other asset classes are now signaling more of the return to a 'risk-on' psychology. EMERGING CURRENCIES have led the way up of late against the US DOLLAR, which is a sign of more global confidence despite the weakening of recent 'rearview mirror' economic releases. In the GLOBAL GOVVIES the SEPTEMBER BUND FUTURE is being pressured once again on those higher than expected European inflation, even if the T-NOTE and the GILT are holding in fairly well.

However, it is also important that DEVELOPED CURRENCIES are finally seeing more progress in their attempt to recover from their mid-month weakness. In that regard, the most telling in its own right and also for the US DOLLAR INDEX is the EUROCURRENCY rally finally breaching the EUR/USD 1.1800 area. On sheer 'trend flow' for the past several weeks, this looks very bad for the bears. (See below for the more extensive view on that, along with a fully annotated EUR/USD weekly chart.)

The one last influence on which many are focused right now is the overall economic impact of Hurricane Ida. And first of all we offer our support for all of those who have been (or are still about to be) impacted by the worst storm in modern history to hit the US Gulf Coast. Yet as we always caution on these catastrophic events, they may be a human tragedy, yet are almost never any real economic drag. The received wisdom is that Ida will only have a 0.2% negative impact on US GDP this quarter.

What we also know from history (such as Hurricane Katrina roughly 16 years ago to the day prior to Ida) is that the rebuilding effort fueled by federal disaster funding is always an economic positive. While it is always hard to look for the boom after such significant carnage, that's the way it works. This means that as soon as the current damage can be assessed and basic services (especially power for various key industries like refining, consumer staples and phones) restored, this will lead to stories of aggressive investment. That will turn into very positive expectations.

Courtesy Repeat of Tuesday's Quick Take

After the early July downside reaction the recovery back above the 4,300 area violated support left the higher resistance into the previous week's 4,360 DOWN Closing Price Reversal with a Tolerance to 4,364. That is clear on the FRONT MONTH S&P 500 FUTURE weekly chart (<https://bit.ly/3BgiyII> updated through Friday.) It is of note the SEPTEMBER S&P 500 FUTURE had managed to retest that area right into the ECB press conference prior to weakening once again the following Thursday morning.

And the SEPTEMBER S&P 500 FUTURE subsequently sustaining activity above the 4,425 and 4,450 weekly Oscillator thresholds was a sign of continued strength as they were still rising \$25 per week. As such, the Oscillator indications remain important after what was the 'lackluster jailbreak' after the previous outstanding US Employment report. With the market dropping back below the 4,450 level two weeks ago, there seemed to finally be some real risk.

Yet even below the key lower interim levels into the recent 4,425 area congestion and the 4,380-65 area bottom of that, it also held key lower support two weeks ago looking forward into last week. That bigger level was 4,340 on both weekly MA-13 (loosely held on all sharp reactions) into last week, and the significant aggressive weekly UP Channel from the major 2,174 March 2020 cycle low.

In the event, the recent late week recovery back above the 4,425 area pointed to the strength of the psychological recovery as well as exceeding the key technical resistance areas. That led to the new all-time highs last week above the previous week's 4,476.50 trading high (prior to the temporary selloff.) That again left the near-term Oscillator thresholds into 4,495 and 4,520 areas (on the rising MA-41.)

Also of note at this point is that into this week the extended (all-time high from last December) Oscillator thresholds will rise to 4,590 and 4,620. The higher of those is right into the major longer-term upside 4,621 'swing count' (see chart) based on the radical selloff extent into the major cyclical March 2020 2,174 trading low.

That seemed an awful long way off when the old February 2020 3,397.50 high was finally convincingly overrun in early November 2020 (on the Pfizer-BioNTech vaccine efficacy announcement), it is much nearer at hand now. This is why the nearer-term Oscillator thresholds remain important this week. For as far as the US equities have come, any sustained activity above them will leave the higher thresholds and that major swing count Objective as the only resistances.

Courtesy Repeat of Tuesday's Evolutionary Trend View

While the FRONT MONTH T-NOTE FUTURE (March at the time) contract had not really challenged the mid-low 132-00 area support, the discounted JUNE T-NOTE FUTURE was only back to trading somewhat above it (as apparent on the weekly chart through Friday <https://bit.ly/3gN8vwz>.) The next key decision into mid-low 132-00 area was the March contract expiration after the JUNE T-NOTE FUTURE failure on the rally into that area.

Even as it recovered then, the bounce back above that area had failed again, with the lower support still down into the interim 130-00 area, and major support not until 128-00 area (2019-2020 congestion.) Yet the subsequent sanguine Fed attitude along with COVID-19 Delta variant concerns seemed to be supporting JUNE T-NOTE FUTURE in its recovery back above 132-00. That opened the door to the retest of the historically prominent 134-00 area seen of late.

However, the quarterly expiration saw the SEPTEMBER T-NOTE at a typical full point discount, even if it recovered nicely from recent activity back below the 132-00 area once again on the FOMC fears. While that should provide comfort to the bears, it was also a risk they could rally to retest the 134-00 area if they did not remain below 132-00. That recovery has transpired in the context of the recent COVID-19 Delta variant spread, with a rally well above 134-00.

That it is also still likely abetted by the consistent FOMC commitment to continued bond purchases, which has led to the push above the 134-00/-16 congestion from March 2020, with the next resistance as nearby as the 135-00 area into recently tested weekly MA-41 that has now dropped to the upper 134-00 area. Yet the more major DOWN Channel resistance (from the 140-235 March 2020 all-time high) is not until the mid-136-00 area.

However, in the wake of all of this inflation pressure, the SEPTEMBER T-NOTE FUTURE was holding up in the mid 133-00 area. That is only a bit below the 134-00/-16 area it recently traded above, and still well above the key lower 132-00 area it recovered above after slippage in March and repeated tests through June.

As recently noted, the question here with the Cassandras fretting over the recently sustained higher inflation indications (including more than a few major central bank officials), why aren't GLOBAL GOVVIES that were seeming to reflect more 'risk-on' until early July back under more pressure? For now that is more so in the BUND than the T-NOTE which is holding up around the low end of the 134-00/-6 area, and GILT still not too far below 130.00-.50 area.

While the **MARCH BUND FUTURE** remained above 173.00-172.50 congestion, as expected it was a bit demoralizing that the JUNE BUND FUTURE was so far below it when it became front month future (as seen in the weekly chart updated through Friday <https://bit.ly/3sWkSLE>.)

That left it more so poised to retest the 170.50-169.75 area congestion that had reached prior to the current recovery rally, with the far more major lower recent and historic congestion in the 168.86-.00 area from the summer 2016 previous all-time high.

However, it was more important on the recent recovery whether it could once again sustain activity back above the 173.00-172.50 congestion. Yet after only rallying into that area on the recent general GLOBAL GOVVIES recovery, this previous weak sister had been back under pressure toward 170.50-169.75 area congestion on stronger European inflation indications despite rallies on central banker assurances regarding inflation.

Even its recent recovery from temporary slippage below 170.50 left it only up into the existing 173.00-172.50 congestion once again. While that leaves a long way back down to the key recently tested 170.50-169.75 area, even after fading from the contrarian FOMC bounce it was only somewhat back below that 173.00-172.50 congestion.

And that lack of any downside momentum left it hanging around the low end of that important 173.00-172.50 congestion of late, with the recent recovery back above 174.00 looking more so like a retest of the 175.00-.50 area was possible under the influence of the recent COVID-19 Delta variant spread.

And now that even that resistance has been exceeded on the extended Delta variant influence, with next congestion back in the 177.50-.00 congestion area that has been vigorously tested in recent trading. Next resistance is as nearby as 178.00 congestion, yet with the extended level in that area being the 178.77 December trading high, and its gap lower from the 178.68 high Close that same week. On the current return to weakness below 177.00-.50 area the key lower remains 175.50-.00 it pushed above in mid-July after a more telling above the 172.00-.50 area.

As the co-downside leader the **MARCH GILT FUTURE** (possibly on the inflationary implications of the Brexit break with the EU) was already failing somewhat below major 130.00 congestion. That was also with the typical full point discount in the **JUNE GILT FUTURE**. That left next support into the mid-low 128.00 area it was recently below prior to rebounding.

Even though back above it once again, it remained vulnerable along with the rest of the GLOBAL GOVVIES. If it should slide further, the next major supports are not until the 126.50 and 125.50-.00 areas. Yet central banker assurances inflation will be transitory had it recently rallying back into the upper 128.00 area of late. While the prominent resistance remains in that 130.50-.00 range congestion (violated previous 22-month trading lows), weekly chart congestion, MA-13 and the gap down from the March contract expiration all pointed to resistance in the low-mid 129.00 area into which it indeed stalled into early June.

And the GILT FUTURE expiration saw the opposite picture from the premium in SEPTEMBER BUND FUTURE. The **SEPTEMBER GILT FUTURE** was actually a typical full point below the June contract when it expired. While it was recently back down below the 128.00 area, we ascribed this to the economic differential between the previously fully reopened UK economy versus some residual drags in Europe.

While recently only modestly back above the 128.00 area, the current rally under the influence of recent UK COVID-19 Delta variant spread had it back up into to the 130.50-.00 range prior to recently backing off. It is interesting that even as the Delta variant continues to impact the UK and global economy.

In that regard, the GILT not rallying any further than a retest of the high end of the 130.50-.00 area was a warning, even if it was maintaining that rally into higher resistance until the recent return of pressure. Next resistance is back up into the 132.00 area, with the mid-February weekly 131.93-131.49 gap lower reinforcing that on any approach to that area for this GLOBAL GOVVIES weak sister.

In **FOREIGN EXCHANGE** the **DEVELOPED CURRENCIES** had also seen massive shifts from the Spring of 2020 prior to quieting down once again. As noted extensively throughout the year, even though the **US DOLLAR INDEX** had a 'haven' bid into mid-February 2020, it then came under extensive pressure against the other **DEVELOPED CURRENCIES** on the more upbeat global recovery outlook on the COVID-19 vaccination success despite near-term setbacks.

After the **US DOLLAR INDEX** had failed to remain out above the 91.00-.23 range in recent trading, next lower support in the 91.00-90.50 area was violated prior to the recent squeeze back above that area (as evident on the weekly chart through Friday <https://bit.ly/3zunumD>.) That still left historic 89.50-.00 area support tested during December through February and just missed in late May as lower support.

Yet in the wake of FOMC moving to a seemingly more aggressive tightening, it was back into 92.30-.00 area once again, which it had recently overrun. While the recent focus was back on 91.00-.50 area (including weekly MA-41) that it could not weaken back below of late, the higher interim resistances above the 92.00-.30 range are into the already violated 92.60. That is along with a fresh major weekly 92.70 down channel UP Break (see the chart.) While recently above the next congestion in the 93.30-.40 area (including the March 93.43 8-month trading high), back below it the 92.70-.60 area will remain a key near-term consideration. This is also tied into the **EUR/USD** decision back into its 1.1800 weekly H&S Top DOWN Break (see below.)

With **EUR/USD** below 1.2000 again, there seemed to be more of a 'risk off' psychology again into early March, which was then independent of the strength of **EMERGING CURRENCIES**. Lower supports were back down into those 1.1815 and 1.1700 areas. That reinforced the potential for more **US DOLLAR** strength. The next lower **EUR/USD** support into 1.1815 had been violated in late March, with next support into the 1.1700 area subsequently tested prior its subsequent rapid push back above the 1.1800 area.

That was extended as **EUR/USD** rallied above 1.2000 again, and even churned above the top of the 1.2000-1.2100 range prior to temporary slippage back below the top end of that range in recent trading. The next significant resistance above is back into the recently tested 1.2200-50 area at the bottom of the early 2018 major range, with next resistances above into the 1.2400 area interim 2018 congestion, and 1.2550 top of that range.

Yet in the wake of FOMC moving to a seemingly more aggressive tightening (now refuted), it was back below 1.2000-1.2100 range with 1.1900 area interim support being violated overall on the way to the current weakness below the 1.1815 interim support. That left the 1.1700 area more major lower support, which correlates well with the **US DOLLAR INDEX** 93.30-.40 area. While much below that the next more major support is not until the 1.1600 area, the recovery back above the 1.1815 interim support meant that was once again the area to closely watch.

And the sharp failure late last week put the 1.1750 area back in play as a weekly Head & Shoulders H&S) Top Neckline (as evident on the atypical one-off weekly chart through Friday <https://bit.ly/3gJ1c98>), which it quietly slipped below on a fresh 1.1800 DOWN Break.

Does that mean the 1.1100 Objective will be hit? Well, long before that would happen it will be important to see if it sees greater weakness below the important late-March 1.1700 area trading low than the temporary weekly Close slightly below it two weeks ago. That is the low between the Head (H) and Right Shoulder (RS), the violation of which is always a key indication of whether the H&S Top is a bona fide pattern reversal, and fulfills at least the minimum bear trend definition of a "lower low after a lower high" (as the right shoulder by definition always is.)

On current form the sheer 'trend flow' for the past several weeks, this looks bad for the bears. Having a sizable weekly pattern DOWN Break show some progress only to not exhibit downside 'follow through' on a selloff two weeks later feels like that overall DOWN signal that is not performing to reinforce the overall trend reversal. It now all comes down to whether the bears can defend the 1.1800 area overall despite the current buoyant price activity.

GBP/USD had already held up much better against the US DOLLAR than other DEVELOPED CURRENCIES in the wake of the Brexit vote finally confirming its exit from the EU. While failing from 1.3500 again in early December, once it recovered the next resistance was not until the 1.3600-50 range it had rallied to in the wake of Brexit agreement prior to reacting back down.

That was back toward the 1.3500 area in January. Next interim resistance was as nearby as the 1.3750-1.3800 area it exceeded into early February, and loosely held on the subsequent selloff. While this might be in part due to the higher UK interest rates, it is interesting to see how it had evolved in the context of recent US DOLLAR weakness assisting in pushing it above major 1.4000 area congestion since mid-May. That had previously held despite any minor US DOLLAR bounces, also now including weekly MA-9 and MA-13 trend supports.

The next resistances were not until the interim low-1.4200 area it recently tested prior to slipping back below it, and the more major 1.4350-76 congestion that includes the April 2018 nearly five year trading high. Yet in the wake of FOMC moving to a seemingly more aggressive tightening (even if now refuted), it was back below the 1.4000 area congestion with 1.3750-1.3800 area next support that had also been violated after previously being tested and holding.

That had a Tolerance down to the hefty March-April 1.3700-1.3670 area 5-month pullback lows congestion (including weekly MA-41) which had also been recently violated. After the recovery back up to near 1.4000 prior to weakening once again left the 1.3750-1.3800 area reinstated as next support, which has now already violated once again. That brought the 1.3700-1.3670 area which was temporarily violated two weeks ago back into focus, with the next interim support in the 1.3500 area, and the more major congestion not until the 1.3300 area. Yet the current squeeze back into the 1.3750-1.3800 area leaves this as critical as the EUR/USD decision, with the weekly MAs also all in that area.

The **AUD/USD** early-November through December surge back above .7200, .7350-.7400 congestion as well as interim .7500 area was a strong sigh that led to temporary strength even above the .7650-.7700 resistance the subsequently fizzled. The next interim resistance was as nearby as the recently exceeded .7800 area it was churning around prior to the resumption of recent weakness.

That left lower supports back into the interim .7500 area it previously dipped modestly below and then sagged further below again. The key lower supports are the recently neared congestion in the .7350-.7400 area and the .7200 area once again.

While recent stability had left it back up near .7500 once again, the COVID-19 Delta variant impact had it back down below .7350-.7400 area, with next interim support back into the .7200 but with the major support not until the .7000 area once again (as back in the Fall of 2020.) However, that leaves the current selloff back below the .7350-.7400 area after the failure to reach .7500 next resistance on the rally, with it recently back below the .7200 area once again prior to the current bounce, and next support not until the .7000 area.

USD/JPY was the prima facie example of the extreme mid-February 2020 'haven' bid in the US DOLLAR, as the typical fellow 'haven' currency YEN came under heavy pressure on the USD/JPY surge above 110.00 for the first time since May 2019, leading to an immediate rally to the prominent 112.00-.50 area into the end of that week.

Yet here as well, once the US DOLLAR came under pressure on its loss of 'haven' status due to the COVID-19 spread in the previously safe US, at the end of February it 'crashed' back below the 110.00 area to Close into 108.00 again. Yet that did not hold since early March began on weakness that carried below the interim 106.00 area and once again below the 105.00-104.50 range (39-month trading low with major tests in March 2018, January 2018 and August 2019.)

On recent form it had been previously churning below 105.00-104.50 as recently as January prior to pushing aggressively back above both 106.00 and 108.00 into early March. That it was above both 106.00 and even 108.00 despite US DOLLAR strength is in line with the strength of other DEVELOPED CURRENCIES, and is thereby another 'risk-on' indication.

The bid leaving the other 'haven' currency reinforced the previous secular US DOLLAR weakness on the violation of higher USD/JPY resistance into 110.00 being temporarily violated into early April prior to weakening back down to hold a test of the 108.00 area. Yet that lack of any 'haven' bid is once again reflected in USD/JPY stabilizing not much worse than the 110.00 area, which runs counter to any shift to a 'risk-off' psychology on the lack of a 'haven' bid in the alternate 'haven' currency.

And **EMERGING CURRENCIES** have now diverged to a greater degree than in recent memory, due to 'country' factors. That has seen the SOUTH AFRICAN RAND weaken to a greater degree, and the previously beleaguered TURKISH LIRA hold more of a bid than seen in a while. However, in general they remain a good general indication of 'risk appetite' due to their economies' sensitivity to overall economic conditions. That seems to also be especially as it relates to the headwinds from the COVID-19 pandemic.

SA RAND had seen **USD/ZAR** failing in early April on renewed 'risk on' psychology violating the next interim support in the 14.70 area (part of the major range from late-2018 through early-2020), even if there was more major support into the 14.50-.45 area it had tested and held back in December through February. While the previous US DOLLAR rallies had seen USD/ZAR ratchet back above the 15.00 area to vigorously test the 15.40-.50 range again, it ultimately reverted to weakness.

That left 14.70 area (in the overall major range from late-2018 through early-2020) next support that had been violated more completely in late March. While that also opened the door for a test of more major support into 14.50-.45 area seen in both December and February, only on the mid-April weakness was that area violated on a weekly Close.

Back below the 14.50-.45 area again overall left USD/ZAR nearer to the 14.00 area, and the prominent historic congestion into the upper 13.00s (including the very important 13.81 July 2019 26-month trading low.)

A new round of weakness in late April set in motion to a new 27-month trading low below the July 2019 13.81 trading low. That left the next interim support at 13.55-.50 which was temporarily overrun into early June, and the 13.23 February 2019 33-month trading low as the next major level that was not quite reached. Yet in the wake of FOMC moving to a seemingly more aggressive tightening, it was back above the 13.80 and 14.00 areas, with next interim resistance into recent 14.20 congestion it also pushed above prior to the recent retest.

Yet more major influence is now likely further COVID-19 Delta concerns. After its inability to sustain weakness back below the 14.20, next resistance was into 14.40-.50 area. That was vigorously tested again of late, and was finally exceeded on South African political violence adding to its already substantial COVID-19 woes.

Even though the violence had abated, the RAND remained weak after a churn around the higher interim area around 14.70 area (with weekly MA-41 at 14.72 at that time.) However, that is with the more prominent recent and historic congestion into the 15.00-.10 area it was recently above on the EMERGING CURRENCIES pressure, only stopping into the next congestion in the mid-15.00 area. Yet the renewed risk appetite has been very prominent in USD/ZAR, with the slide since early last week dropping back below 15.00-.10 area, 14.80-.70 and even the 14.40-.50 area, leaving 14.20 once again as the next key congestion (early-August trading low.)

Even when other EMERGING CURRENCIES have reacted to the downside of late, the **RUSSIAN RUBLE** had seen **USD/RUB** weaken at times on the back of sustained CRUDE OIL strength. The USD/RUB drop back below 75.00 since late April has seen it even slip below the 73.00-72.50 area prior to the recent recovery back above it.

That recent break was despite US sanctions and the weakness of other EMERGING CURRENCIES in the wake of the previous FOMC announcements and Chair Powell's press conference prior to recovering last week.

Lower support is the 72.00-71.75 interim area (albeit still at a 10-month trading low) with the next major support still into the 71.00-70.00 area that was temporarily violated on the combined temporary US EQUITIES weakness and OPEC negotiations disarray. However, after the recent OPEC disruption USD/RUB was back above 73.00-72.50 area to nearer the 75.00 area prior to weakening once again to retest 73.00-72.50 area. After that held, weakening CRUDE OIL prices had seen it rally back up nearer 75.00 once again prior to stalling. However, the recent major CRUDE OIL recovery has seen it drop back near the 73.00-72.50 area.

The **MEXICAN PESO** saw **USD/MXN** selloff after the early-mid March surge quickly violated the lower interim 20.90 congestion, with the interim 20.65 congestion also violated on the way to the broad berth next support in the 20.25 area. That included an important 20.30-.10 weekly chart gap from on the way up in March of last year that had already been violated last November.

It then failed once again into a retest of the additional significant historic congestion (2018-2019) in the 19.80 area, with the next hefty historic congestion as nearby as the recently very vigorously tested 19.65-.50 area. The overall bottom of the very significant late-2018 through early-2020 range is not until the 18.50-.40 range.

That was even allowing there are interesting interim supports at 19.30 and into the 19.00-18.90 range. That said, the current rally back above 19.80 was more critical even after the previous failure as nearby as the 20.25-.30 area. Now slightly back above 20.00 leaves that as the near-term consideration on a weakening 'risk-on' psychology despite what seems to be some support from sustained CRUDE OIL strength.

While higher hefty congestion is the 20.30 area, there is also the higher 20.65 congestion it traded very temporarily above in mid-June prior to weakening below 20.00 again. While next higher resistance is the 20.90 congestion, the focus shifts more so to the 20.00 and 20.30 congestion areas once again after its recent inability to fail on serial tests of the 19.80 area.

Despite the recent CRUDE OIL slippage back below the 75.00-74.00 area leaving USD/MXN weakening back below 20.00, the extended CRUDE OIL weakness below even 71.00-70.00 nearer to 65.00 support prior left USD/MXN back up above 20.00 area to nearer 20.25-.30. However, the restrengthening of CRUDE OIL had USD/MXN back down into the 19.80 area, which it has interestingly held despite the partial return to CRUDE OIL weakness.

Yet the extended energy market drop has seen it back above 20.00 after recent serial tests of the 19.80 area. However, after breaching the recent hefty 20.25 area congestion (also tied into the 20.10 weekly MA-41 at that time) it is back below it, even if only churning around the 20.00 area for now (also weekly MA-9 and MA-13.)

The TURKISH LIRA had been back under pressure since **USD/TRY** pushed back above the 8.00 hefty late 2020 congestion back in March. That left the LIRA as the outlier weak sister, with the inability of USD/TRY to drop below 8.00 turning into another bout of strength back above recent 8.20-8.23 short term congestion.

While it was slightly below that until mid-April, the recent weaker indication was a late April daily DOWN Closing Price Reversal from 8.3750, which left 8.40 as a general Tolerance that needed to be watched into May. Above that again in line with the other EMERGING CURRENCIES weakening on the temporarily diminished 'risk-on' psychology into mid-May reversed into USD/TRY strength once again.

While that left the door open to a full retest of last November's 8.5146 all-time high weekly Close, with only the 8.5765 coincident all-time high above that. While the LIRA seemed to firm on the mid-May return of the 'risk-on' psychology, that did not even bring a USD/TRY drop back to the 8.23-8.20 range. And while it recently did drop back near that lower interim congestion last week, it was then surging back up to somewhat above the late-May 8.7424 all-time high.

However, there has been a contrarian LIRA rally last week into this week on USD/TRY slipping back slightly below the late-May 8.7424 all-time high. That said, the more important near-term lower support is now the recent 8.52-8.45 area congestion it had slipped below nearer to that 8.23-8.20 range earlier this week prior to recovering into the 8.52-8.45 area once again. Yet it is now the case that weekly MA-13 and MA-9 have stalled up into the 8.54-8.57 range, reinforcing resistance around that 8.5764 previous major November 2020 all-time high.

And the weekly Oscillator indications suggest that it was up against near-term weekly Oscillator thresholds prior to the recent more prominent selloff. While the more critical thresholds (reinforced by recent topping into the minor new highs) are into June's current 8.7917 all-time high, those moot after the current two-month selloff. The recent USD/TRY weakness has left it more so down into the early-August 8.2960 and early-June 8.2832 trading lows, with the more prominent support down into the 8.00 area (including weekly MA-41.)

Reports & Events

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, the Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the www.rohr-blog.com sidebar.

There was relative quietude over the past two weeks on the midmonth data lull and the substantial lack of most central bank influence, outside of Powell's vaguely accommodative Friday speech. As such, if macroeconomic influences are going to return to prominence, it is likely to happen during this 'monster' data week. That is typically the case during old month into new month weeks, and there are special considerations this week.

Despite the UK Summer Bank Holiday, Monday sees a raft of late month data, including Japanese Retail Sales, major European economic releases and sentiment indicators along with the OECD Quarterly National Accounts - GDP Growth. Tuesday can reasonably be designated "the longest day" with its major global end-of-month economic releases.

As the first day of the new month, Wednesday of course brings the global Manufacturing PMIs along with important European data, and the US ADP Employment Change. It is interesting inflation data on Thursday along with US Weekly Jobless Claims and other important US economic releases. Needless to say, Friday brings the US Employment report prior to the long US and Canadian Labor Day weekends into their holidays next Monday.

Of course, the troubling resilience of the COVID-19 pandemic on the continued Delta variant spread continues to offset more upbeat recent vaccination developments. As such, you will likely not be at all surprised that we obviously maintain our recent advice that has been fully vindicated again of late: Keep those seat belts firmly fastened.
