Dear Alert Service Subscriber,

We are back to being more circumspect on the MARCH S&P 500 FUTURE just temporarily today due to the US Martin Luther King Day holiday bringing some rest to recently highly volatile markets. That said, it does not eliminate the current significant tension due to the market having dropped down to (and temporarily slightly below) the very major 1,865-60 critical long-term trend support.

Whether it holds when regular trading (versus today's electronic only session) resumes will be the key not just for the US, but other equities as well. As it happens, the weakness of the US equities dropping to major trend support is matched by the FTSE and the NIKKEI, and is passingly similar in weaker sister DAX. Of course, that only intensifies the decision by the relatively firmer US markets.

As noted previous, there were... No Surprises!! Each of the previous **MARCH S&P 500 FUTURE** slides below 1,975-70 congestion (during August and September) overran interim supports in the 1,960 and 1,930 areas to at least test the 1,900 area and sometimes fall well below it. And the test of the 1,900 area (with some slippage) is just what we saw last Monday even if the failure below it took until Wednesday afternoon.

Here's the critical consideration into Tuesday: Failing sharply Friday morning on weak energy and commodities from the low end of 1,932-25 looked pretty bad well back below 1,900. In fact, overnight trade also swinging below Thursday's 1,872 low would seemed to indicate another failure...

...except for one thing: MARCH S&P 500 FUTURE still has that more critical major trend support in the 1,865-60 range. We always prefer when a critical area is reinforced by several major technical factors. In this case that range is not only the late September pullback low, and a major Fibonacci 0.25 retracement (from the 1,068 October 2011 low to the highs.)

It is also the major weekly up channel support for the entire trend since the 666 cycle low back in March of 2009. As such, as far and as fast as the US equities have dropped the first part of this year, whether they will now enter an extended meltdown phase will be determined by what transpires later this week.

Below 1,865-60 on a weekly Close the next interim supports are the sharp selloff lows at 1,831 and 1,813, with next major support not until the 1,775-60 range.

[For those of you who are subscribers, see the latest Global View TrendView video analysis at www.rohr-blog.com for more on that long term monthly chart channel trend support. It is available to all Gold and Platinum echelon subscribers along with the Market Observations.]
