Dear Alert Service Subscriber,

We are back to being more circumspect on the MARCH S&P 500 FUTURE.

Which is not to say it is not highly active at present. However, after failing the key aggressive uptrend support on Tuesday, it is necessary to observe its activity for a while in the next lower keys support area at present. All of that is reviewed below.

After noting that so much other weak to outright abysmal economic data had inspired a significant 'bad news is good news' rally in the equities, there was one factor that still has the ability to depress equities prices: **the return to extensive Crude Oil weakness on the back of Iranian rejection of attempts to cap production in the near-term.**

While this was not necessarily unexpected, it still hit the NYMEX front month (APRIL) CRUDE OIL FUTURE hard enough to send ripples through other asset classes. It had dropped two dollars from the upper 33.00 area Monday to below 32.00 by Tuesday's Close, and is off more than another full dollar at 30.75 this morning. It will be very important for other asset classes to see if it can stabilize at no worse than 30.00.

Here's the critical consideration today: The key this morning is the current **EQUITIES weakness putting the MARCH S&P 500 FUTURE back down below last Thursday's 1,922 DOWN Break.** While that seemed to be Negated on Monday's significant gap above the higher 1,925-32 resistance, the extended energy market weakness dropped it back below 1,922 late Tuesday.

The further energy market slide this morning has dropped it back into previously overrun 1,902-1,895 congestion. that is very important as well into the 1,898.50 pullback low into that area last Friday (prior to Monday's higher opening.)

If it can hold not too much worse than that trading low, especially the 1,892 bottom of the daily chart gap higher last week Tuesday morning, it may be ready to rally again. However, if it fails that lower support, another swing down to the more major 1865-60 area (also reinforced now by a substantial daily chart gap) is very likely. Quite a bit of that decision likely rests with whether the CRUDE OIL manages to hold 30.00 or ends up sliding back below it.
